At any point in an open channel, the flow may have velocity components in all three directions. For the most part, however, open-channel flow is assumed to be one-dimensional, and the flow equations are written in the main flow direction. Therefore, by velocity we usually refer to the velocity component in the main flow direction.

Open-channel flow, a branch of hydraulics and fluid mechanics, is a type of liquid flow within a conduit with a free surface, known as a channel. The other type of flow within a conduit is pipe flow. These two types of flow are similar in many ways but differ in one important respect: the free surface.
