Natural products chemistry is a distinct area of chemical research which was important in the history of chemistry, the sourcing of substances in early preclinical drug discovery research, the understanding of traditional medicine and ethnopharmacology, the evolution of technology associated with chemical separations, the development of modern methods in chemical structure determination by NMR ...
Natural products can lead to drug discovery. Many modern synthetic drugs have their origin in bioactives from natural products. Sixty-seven percent of chemotherapy drugs have a natural origin. In 1021, Taxus baccata was introduced for phytotherapy in The Canon of Medicine for cardiac remedy.

Pharmacognosy is the study of plants or other natural sources as a possible source of drugs. The American Society of Pharmacognosy defines pharmacognosy as "the study of the physical, chemical, biochemical, and biological properties of drugs, drug substances, or potential drugs or drug substances of natural origin as well as the search for new drugs from natural sources".

Thanks to increased chemical and drug development in the 20th century, more drugs with abuse potential became available. LSD, methamphetamine and synthetic opiates are all relatively recent drugs. To counter the growing tide of addiction, drug laws became stricter, and drug addiction started to carry a serious social stigma.

The impact of time, therapy area, and route of administration on 13 physicochemical properties calculated for 664 drugs developed from a natural prototype was investigated. The mean values for the majority of properties sampled over five periods from pre-1900 to 2013 were found to change in a statistically significant manner. In contrast, lipophilicity and aromatic ring count remained ...
About 40% of the drugs currently used are derived from natural sources. Most are pure substances which are isolated from various organisms and used directly or after chemical modification. This book describes the origin of such compounds, their chemistry and biochemistry as well as their employment in medicine.

Cultivation of drugs of natural origin: The cultivation of medicinal plants requires a lot of care and management as compared to that of other plants.

**Cultivation and Collection of Drugs of Natural Origin**
When the nucleus of drug obtained from natural source is retained but the chemical structure is altered, we call it semi-synthetic. Examples include Apomorphine, Diacetyl morphine, Ethinyl Estradiol, Homatropine, Ampicillin and Methyl testosterone. Most of the drugs used nowadays (such as antianxiety drugs, anti convulsants) are synthetic forms.

**Sources of Drugs - howMed**
Crude drugs: Products of plants and animal origin found in raw form and pharmaceutical products from natural origin & include subs from mineral origin like kaolin, bentonite, etc. Crude drugs are further grouped as organised (cellular) or unorganised (non-cellular) according to whether they contain a regularly organized cellular structure or not.
