statistical techniques for summarizing the results of independent experiments and is increasingly being used in ecology. The response ratio (the ratio of mean outcome in the experimental group to that in the control group) and closely related measures of proportionate change are often used as measures of effect magnitude in ecology.

Introduction. Integrating insights from both phylogenetic and experimental approaches offers a more complete understanding of evolutionary patterns and processes, yet this is rarely a feature of investigations into the evolutionary significance of trait variation (Weber and Agrawal, 2012). The significance of this approach is that it reveals whether micro-evolutionary processes identified ...
