Software problem framing is a way to find specifications for software. Software problem frames can be used to structure the environment of a software system (the machine) and specify desired software properties in such a way that we can show that software with these properties will help achieve the required effects in the environment.

Problem Analysis or the Problem Frames Approach was the third software development method that Jackson developed. It concerns itself with aspects of developing all kinds of software, not just information systems. It was first sketched in his book Software Requirements and Specifications, and described much more fully in his book Problem Frames.
