How to avoid document-based malware attacks - TechRepublic
Advanced Placement (AP) The dreaded DBQ, or "document-based question," is an essay question type on the AP History exams (AP US History, AP European History, and AP World History). For the DBQ essay, you will be asked to analyze some historical issue or trend with the aid of the provided sources, or "documents," as evidence.

What is a DBQ? The Document-Based Question Explained
A document database is a type of nonrelational database that is designed to store and query data as JSON-like documents. Document databases make it easier for developers to store and query data in a database by using the same document-model format they use in their application code. The flexible, semistructured, and hierarchical nature of documents and document databases allows them to evolve with applications' needs.

What Is a Document Database?
A document-oriented database is a specialized key-value store, which itself is another NoSQL database category. In a simple key-value store, the document content is opaque. A document-

oriented database provides APIs or a query/update language that exposes the ability to query or update based on the internal structure in the document. This difference may be moot for users that do not need richer query, retrieval, or editing APIs that are typically provided by document databases.

Document-oriented database - Wikipedia

A document store database (also known as a document-oriented database, aggregate database, or simply document store or document database) is a database that uses a document-oriented model to store data. Document store databases store each record and its associated data within a single document.

Paper-Based Documents. Paper-based documents has been used by man ever since paper was invented. However it is widely held that keeping and maintaining paper-based documents is unnecessarily cumbersome and costly, now that we have the option of maintaining electronic versions of documents. It is estimated that between 85% and 90% of corporate information is not accessible through computer networks because it exists in the form of paper documents.

Paper-Based Documents - CVISION Technologies

A document's schema is dynamic and self-describing, so you don't need to first pre-define it in the database. Fields can vary from document to document and you modify the structure at any time, avoiding disruptive schema migrations. Some document databases offer JSON Schema so you can optionally enforce rules governing document structures. 3.

What is a Document Database? | MongoDB

In American Advanced Placement exams, a document-based question (DBQ), also known as data-based question, is an essay or series of short-answer questions that is constructed by students using one's own knowledge combined with support from several provided sources. Usually, it is employed on timed history tests. In the United States

Document-based question - Wikipedia

Document-based questions (DBQs) are the meat and potatoes of high school history classes and AP courses. These essay or short-answer questions require students to construct a response after inspecting provided historical documents. As new standards prescribe more evidence-based thinking and less rote memorization, even middle school teachers ...
